THE SILVER KING TICKLES ITS SUBJECTS

Another \$100,000 Distribution to Be Made Today-Horn Silver Getting Ready to Speak.

The Silver King of Park City will reappear among its subjects today with dividend of \$100,000, this its eighth appearance since January 1 last, With this distribution, which increases the total for the year to \$500,000, the grand total is swelled to \$5.125,000, while it is said of the surplus at this time that it approximates balf a million with each month adding to it, with the wealth underground almost defying accurate

computation.

On the Manmoth company's distribution of 5 cents a share, sor \$20,900, which takes place on Monday lext, the transfer books were closed yesterday, white those of the Daly West, from which the shareholders will draw down \$72,000 on August 15, will close today. That the directors of the Grand Central will, at their meeting in Prove today, post the usual dividend of \$25,000 is most likely. On the present market value of the King, which was an offering last night at \$50 per share, the holder is receiving nearly 14 per cent per annum, while Daly West at \$13.70, which figures ruled in the trading yesterday, is paying its adherents over 55 per cent, with Mammoth at \$1.50 carning 30 per cent, and so on down earning 30 per cent, and so on down

was said yesterday that the directors of the Horn Sliver of Frisco Ajax will, at their approaching meet in New Alice Syrk, post another dividend of 5 cents, 1001.1 or \$20,000, while there is a possibility of its coming forward with an "extra during the holidays. Then there is the U.S., which will add to the month' splendid exhibit on Monday next with a distribution of 50 cents a share, or \$200,000. Some money for a warm month and a demoralized market.

DIVERS GO WEST.

Complete Their Labors Under Water

at Bingham Pump Station. The submarine divers having accomplished results for which they were brought to this State by the manage ment of the Utah Copper company o Bingham and returned to their retain ers the big Cornish pump by which the blg concentrator in Bingham canyon is supplied with water, required in the reduction of the company's copper, gold and silver-bearing porphyries, departed for their moorings in San Francisco yesterday. The results sought of them were more than expected, said Manager Jackling last night. Not only did the divers descend beneath ninety teet of water and close of the bulk-bead through which the water from the lead through which the water from th canyon was entering the shaft, but the pump where its derangements were ac-cessible, was remained, the balance of the work—that of a few minute—to be completed when the shaft is unwatered. completed when the shaft is unwatered. And yet means, compared with those in common use under similar conditions, were comparatively inexpensive. Among other things the diver demonstrated was that he could remain under 85 feet of water for over two hours and thirty minutes, and that, with adequate appliances, he was capable of removing, single-handed, and readjusting fittings that weigh over 700 pounds.

fittings that weigh over 700 pounds. In the next few hours the mill will again be running at the normal, while from the mines is now coming as average of 400 tons of are daily, this to be increased as soon as Superintendent Januey shall order it.

Janney shall order it.

Meanwhile with one section of the Cornish plant and two shikers in commission, the waters are being reduced to a point in the supply shaft that will enable the management to get at the other section of the Cornish pump in a few days. The bins at the mill are again being loaded with high-grade copper concentrates from the "low-grade" ores.

SULPHIDES OF ARSENIC.

Rare Examples in Realgar and Orpiment in Mercur Mines.

Discussing realgar and orgiment variction of arsenical sulphide that occur quite freely in the gold-bearing ores of Mercur, the Engineering and Mining Jour-

Morch, the Engineering and Mining Journal Says:

"Resilgar and orpiment are very beautiful, though not abandant, minerals which occur associated with ores of silver and lead in various European mining regions and also those of Japan, Hungary, Bobemia, Transgivania and Saxony. They have been reported in the United States in best of sandy clay beneath fava in Iron county, Utah, and form the so-called signoidal gold ore of the Golden Gatemine, Mercur, Tooole county, this same State, also be San Bertandino county California; Dougas county, Oregon, and in minute quantities in the geyser waters of the Yellowsione National park.

Realigar is assed mainly in pyrotechny, yielding a very brilliam white light when mixed with salipoter and tentied, it is now artificially prepared by fusing together autiphut and arsenious acid. Orpiment is used in dying and in preparation of a paste for removing hair from saling. As with realigar, the minoral is now largedy prepared artificially.

The speciments occurring at Moreau occasionally in crystain as clean-cut and initiant as a jewel, are generally sought by collectors.

RUMOR WAS PREVIOUS.

Yankee Con. Will Not Return to Dividends for Some Time.

While the contents of the Yankee Con.'s stocking are not remote from \$50,000, it is not the intention of the company, says its local management, to company, says its local management, to return to the dividend column until such time as there is assurance that it can maintain a portion among the regulars; intermittent rumers to the contrary notwithstanding. The property has been doing very well during this season and while the are tonnage has not been a heavy from them it has enabled the management to pressoure an unusual amount of exploratory work and there is not a little at this time to indicate improved conditions and bigger resources at greater depth.

THE DAY ON CHANGE

Daly Does Some Sprinting as Did Carina and Yankee Con.

The day on the mining exchange closed on the sale of 18.725 shares of stock, for which \$7319.50 was paid and with the market, netwithstanding the baked condition he weather, a fittle more busysmi. to favorable reports from the new ody in Mazerpa ground, did some ling and from an opening at \$2.55 d up to \$2.50 at the close, while the brought \$4.55, with Columbus Con-ita changing hands at \$1. Carissa, the talent somewhat astonished by that figure asked for it at the finish. Yankee Con, appeared in better form and on rumors that it would probably undertake to do as much for its shareholders as was Uncle Sam, which will release a few pieces of money the present month, shot up to its cents, was Sacramento in good demand around it, and New York around i the day closing on the following market:

THE TRIBUNE NEWS STANDS NEW LEAD STRIKE IN OLD MAMMOTH

Fine Body of Good Quality Encountered While Driving to Connection With Gold Channel.

To the chapter of gold strikes that have been recorded at the Mammoth of Tintle during the mason has just been added one in which lead preponderates, hald Samuel McIntyre, Jr., the energetic superintendent of the mines, who came up from camp yesterday morning. It was while extending the 1000foot level to a connection with the goldbearing channel that the body of lead ore was encountered in the limestone,

said Superintendent McIntyre, and when he left a full breast of ore bris-tling with galena was exposed. Assays from the body exhibited by him reveal as much as 46 per cent lead and 10 ounces sliver, with \$4 gold per ton, and while the extent of the unexpected diswhile the extent of the unexpected dis-closure is not known it appeared strong when the visitor left. Meantime the gold-bearing channel becomes hourly more interesting. And while it was lost for a few rhifts on the 1299-foot level Jt has been recovered on the 1100 and stoping is now in progress there. The surfferous contents of the rock at depth of 1900 feet, said Mr. Me-Intyre, are fully as good as are they Intyre, are fully as good as are they in other portions of the channel, while there is everything to indicate that it is

headed for greater copts.

During the day there was marketed two lots of second class gold ore containing 191 tone, the gold values running from \$16 to \$22.60 per ton, with some silver, while several more car-loads are in transit.

EVOLUTION OF NEWHOUSE

Millions of Brick Now Ready to Go Into Projected Structures.

Active surveying preliminary to the platting of the site at Newhouse began yesterday morning with Gerald B. Street. at the triped, the architect on the New house staff to enter the field immediate house staff to enter the field immediately after the work of the engineer is completed, with active construction of the hotel, the collaborate and theater, the school-house and dwellings to follow, For these structures a contract was let several months ago for many millions of which is ready to begin with the completion of the railroad between Newhouse and Frisco, while Mr. Dederichs, the superintendent of construction, is ready to organize his forces at once.

To hasten the delivery of material for entipment at camp, A. F. Bettles, who will exercise a general supervision over that department while superintending its installation, leaves for the East tonight with his spurs on and consignments weighing many tons will have soon begin to move.

gun to move.

W. C. Thomas, who is the director general in the campaign of construction, departed for camp again last night, accompanied by Mrs. Thomas, who will remain in the new camp a short time.

UTAH AND TONOPAH

Local Interests in the Big Camp Taking Care of Themselves.

The Tonopah Bonanza has the followmg on properties at that camp in which Salt Lake is interested: The Montana-Tonopah company has shipped two hundred tons of ore this week, and more dred tons of ore this week, and more would cave gone out had care been aviitable. It is hoped that the switch to the shaft will be completed today, and as more ore cars will be obtainable the shipments will be largely increased.

At the Tim Burler bids are now being received for drifting south from the 40 foot level of the east drift of the Valley View shaft to connect with the shaft on the one Cabin chain.

The pumping plant at the Halifux, owned by Messrs, Keith and Resrns of Sait Lake, having been repaired the water is now easily kent under control and the shaft is now being retimbered, when completed sinking will be resumed.

GOLD HUNTER ORES.

Milling Second Class and Piling Up High Grade in Bins.

The mill on the properties of the Gold Hunter company in Cocur d'Alene is now reducing about 250 tons of ore datiy, says Manager D. P. Rohlfing, on the eve of his departure for the souththe eve of his departure for the south-ern country, this supply having been derived entirely from development work. Meanwhile considerable first-class are is being placed in the bins and the outlook for active shipments during the autumn months is quite as-suring. However, said Mr. Rohlfing, there will be no active stoping until the main objectives for which he start-ed last spring have been reached.

THE COPPER MARKET.

Foreign Consumers Stocking Up Against Future Requirements.

Hayden, Stone & Co., of New York my Statistically copper to in an improving position, although it is not reflected to any advance in prices. The July exports from this country, 18,770 tons, or 27,000,000 pounds, is the largest July shipment on record. For the first seven months of this year we have shipped abroad 121,225 tons, or 25,20,000 pounds, which is but 75,000,000 pounds short of the chipments for the entire year of 1000. It is not to be presumed that this copper gives into immediate consamption, but it is evident that the forcism purchasers are sufficiently convinced of the strength of the market to warrant them in stocking up against future requirements. from this country, 18,770 tons, or 27,000.00

Boston Fairly Active.

Special to The Tribune.

BOSTON, Mass, Aug. 2.—The copper share market was a very tame affair today. Stocks at the opening were furify active and in good demand, but as soon as the first accumulation of orders were out of the way the market became eniet and tregular. Some of the higher-class securities remain strong and in good demand, but unless activity continues the medium and law-priced lesses drug. The rise in the New York market to the late afternoon half a good effect on local abaces, which closed active and strong light chief active and strong light half which could be street. A WASTE OF TEARS.

A Boston Publication Says Its Market Was Wary of Daly West.

The Commercial Bulletin of Boston, rethe Commercial Ruletin of Reston, re-viewing the market, says: "There is no U. S. Mining passing for site, and we think with any hind of an upward move-ness in copper this stock will sell ligher than it has been for over a year. It is on a quarterly dividend basis of seconds a shary now and, more than that certain people stand resty to take all stock of-fered and to help any advance in the price.

Fire "Hingham is another stock in which and operations stopped when the mining sarket turned a couple of weeks ago, not the talk on it is as builted as ever, and it would not be suprising to see it reak through its top this fail." Toward Daly West the Builletin appears a be very bifter and in its comment says. The less said about this Morrison outfit he better in spite of its dividend payments and builted in the or the property seaton has always been a bit skeptical of his outfit.

this outfit. Boston, h is to be inferred, partons very lightly of the "ratfit" which has passed round dividends amounting to \$4.513.26. From the "heller which has come from that source, ("hah had been induced to believe that its investors had bought freely. The Bulletin's confession that the market has always regarded it suspiciously justifies the conclusion, however, that there has been a waste of tears in Boston's behatf.

THE BULLION STRIKE.

Disclosure Made in Cross-Cut Extending From the Main Shaft.

Arrivals from Stockion say that while the mine management (at the properties of the Bullian company is exercising a rigid carsorship over those employed underground and prohibiting, on pain of dismissal, any information concerning the reported strike, a strike of considerable importance has an-doubtedly been made, with character-istic ore exposed. It is supposed that it is in the main Bullion ledge, pro-ductive in former years of oresidence. uctive in former years of ores of ex-ellent quality, but of this there is othing definite. The disclosure was made in the crosscut extending from the old Bullion shaft to meet that ap-preaching from the Honorine tunnel and not in the latter, as originally exploited. It is creating a great deal of interest and the return of President Greene is auxiously awaited.

THE METALS MARKET

Silver Quite Steady Under the Far Eastern Demand for It.

The metal markets continue to show ery little change, and may be called dull,

with only the slight exception noted below, ways the Engineering & Mining
Journal of New York.

Silver remains very steady, under the
influence of continued buying from the
East, and there seems to be no prospect
of any immediate decline of importance.

In copper very little is doing for home
consumption, and buyers seem to be taking little interest in the market. European demand, however, continues fair
only, not all the fear of political complications having passed away; though
consumption over there appears to be on
a very good scale indeed. Lead remains unchanged, both us to prices and
business.

New Company Launched.

Ores and Bullion.

In the ore and buillon market the day a settlements amounted to 195,700, Mo-Cornick & Co. reporting them as they follow: American buillon, 155,000, gold buillon, 155,000, gold, silver, lead and copper over, 453,000.

DGE IS POWER

THE COPPER BELT MAKES A RECORD

Big Tonnage of Ore That Passed Out of Bingham Over Its Rails the Pravious Month.

Notwithstanding the crop of holidays and the days lost in recovering from them in July, traffic over the Copper Belt railway at Bingham during that month showed a new record, with this to be exceeded in August. In July there was forwarded from the various mines upon the route to the Rio Grande soding station at Bingham as many a 29,632 tons of ore, with the forwarding ore from the Utah Copper company of ore from the Otah Copper company mines suspended while the pump-station, three miles below, was being repaired. During that period, however the output of the U.S. company Bingham system was dispatched ove the Copper Belt, so that it was possible maintain the traffic, although in the beence of interruptions it would have adoubtedly, exceeded 55,000 tons. T egular consignors over the route his time include the Boston Con., Consercial, Ohio Copper, Utah Copper and made, in all probability the present

THE FIFTH FURNACE.

New Blast at the Bingham Con. Rapidly Approaching Completion.

Superintendent William H. Nutting of Superintendent William H. Nutting of the Bingham Con. smeller, who was a visitor from the valley during the after-noon, says that the fifth furnace will unaboultedly be ready to go into commis-sion on or before October I, and that with readjustments now in progress he will then be ready to make a record. The new sampler is doing its work most satisfactority, while the system of elec-tric slag-haulage is doing much to sim-plify the handling of that product, Meanwhile a large volume of ore con-tinues to arrive at the bins and conditions at this time are most satisfactory.

Mining Notes.

That the Bullion-Beck holdings are being sought by the United States Mining company is dented in Boston-officially, it is assumed. Meanwhile, and with the new strikes, that Thitle proposition does not appear to be at all desirous of getting hold of a new master.

The stringing of the new cable on the nited States trainway at Bingham having been completed. Superintendent Allen ett for camp again yesterday morning to it go into commission again. George Hern, manager of the Con. Mer-ur, is in from that property, from which early 600 tens of gold ore is new going not the big mill.

George Gum of the American Smelting and Refining company's staff has returned from the borth. On his personal assur-ince, he has been flating.

S. M. Levy of the Western Exploration ampany has gone into Idaho. Manager Charles L. Rood of the On-tario, Daly and Nathdriver mines at Park City has gone to Park City again. The management of the Yampa yester-lay marketed 15,000 pounds of copper, old and allver-bearing matte from its melter at Bingham.

The Eureka-Hill of Tintic reached the nited States furnaces with another lot f concentrates during the day.

President John Dern of the Con. Mercur is ganning for the manager of the waste-paper advertising caus, from which a new coar of paint was wiped by the former yesterday.
